# **DashBoard**<sup>™</sup>

DashBoard<sup>™</sup> is a control / monitoring application for the openGear<sup>®</sup> platform. It is available at no cost, and works with Windows<sup>®</sup>, Mac<sup>®</sup> and Linux<sup>®</sup>.

DashBoard<sup>™</sup> provides a centralized user interface for all populated frame slots, allowing users to view and control all frames and cards on a network with a consistent, easy-to-use graphical interface. Cards define their controllable parameters to DashBoard<sup>™</sup>, so the control interface is always up to date.

In addition to extensive control and monitoring capabilities with its intuitive GUI, DashBoard<sup>™</sup> allows for easily performed card software updates. Software update files can be downloaded from the Cobalt Digital website and then uploaded through DashBoard<sup>™</sup>.

To communicate with DashBoard<sup>™</sup>, an openGear<sup>®</sup> frame must have the optional MFC-8320-N network card installed.

## **Network Controller Card**

The MFC-8320-N is an optional network controller card that allows the 8321 openGear<sup>®</sup> frame to communicate with multiple copies of DashBoard<sup>™</sup> or a Cobalt remote control panel via Ethernet and TCP/IP. This allows remote access to the openGear<sup>®</sup> frame across both LAN and WAN architectures. (HPF-9000 high-power frame comes standard with the Network Controller Card.)

The network controller card can also be purchased with SNMP support, for large scale monitoring implementation.

#### **FEATURES**

10/100 Mbit Ethernet Control — Enables multiple connections to DashBoard™ DataSafe<sup>™</sup> feature stores all card parameters local to the frame, greatly reducing downtime if hot swapping solutions

monitoring
